## Model PSM

## A Scrapping, Pre-Flushing and Disposing System with:

- Standard Scrap Basin, Model SM
- Pot/Pan Scrap Basin, Model PSM

**Recirculated Water** used by the system for pre-flushing will reduce water and sewer cost by thousands of dollars per year. The ScrapMaster consumes only 7 gallons of new water per minute while the heavy pre-flushing plume recirculates at a 30 gallon rate.

**Scrapping Speed** is more than doubled by a single operator as both hands are used for scrapping. The ScrapMasters powerful plume of water takes the place of a less productive pre-rinse spray.

**Problem Dishes, Trays and Cookware** with dried or baked-on food need much less hand work as they can be soaking in the scrap basin while the scrapping process continues.

**Design Flexibility of the ScrapMaster** allows the pre-flushing and scrapping of all types of soiled tableware and cookware. The standard scrap basin accepts all soiled tableware as well as school trays. The pot/pan scrap basin accommodates dishes, school trays, pots, pans and even 26 inch sheet pans.

**Less Splashing** occurs with the ScrapMaster water plume compared to a pre-rinse spray.
